1 Introduction

The world we live in is more connected, with people living across various regions interacting in real-time without ever stepping outside their house. For people are expanding relationship day by day, a social network is always effectively playing an important role to help them keep in touch with each other. Inspired from Facebook, the largest social network in the World in term of number of users, we harboured a dream of creating a similar website broadening relationship and connecting them as well. That is the story of OnlyFriends, a friendly social networking website.

2 Analysis

2.1 About

A Web service that allows users to upload status, comment and share their daily thought.

2.2 Detail Description

The application should be supported the following requirements:

- User must register or login with existing account
- Content creator should be able to upload a photo and status.
- The user should be able to comment on other's post.
- The user should be able to follow other's profile.

2.3 Description of analogs:

- *Facebook* is a social networking site that makes it easy for you to connect and share with family and friends online. Originally designed for college students, Facebook was created in 2004 by Mark Zuckerberg while he was enrolled at Harvard University. By 2006, anyone over the age of 13 with a valid email address could join Facebook. Today, Facebook is the world's largest social network, with more than 1 billion users worldwide.
- *VK* is a Russian online social media and social networking service based in Saint Petersburg. VK is available in multiple languages but it is predominantly used by Russian-speakers.
- *Instagram* is an American photo and video sharing social networking service founded by Kevin Systrom and Mike Krieger. In April 2012, Facebook Inc. acquired the service for approximately US\$1 billion in cash and stock

2.4 Comparative analysis of analogs:

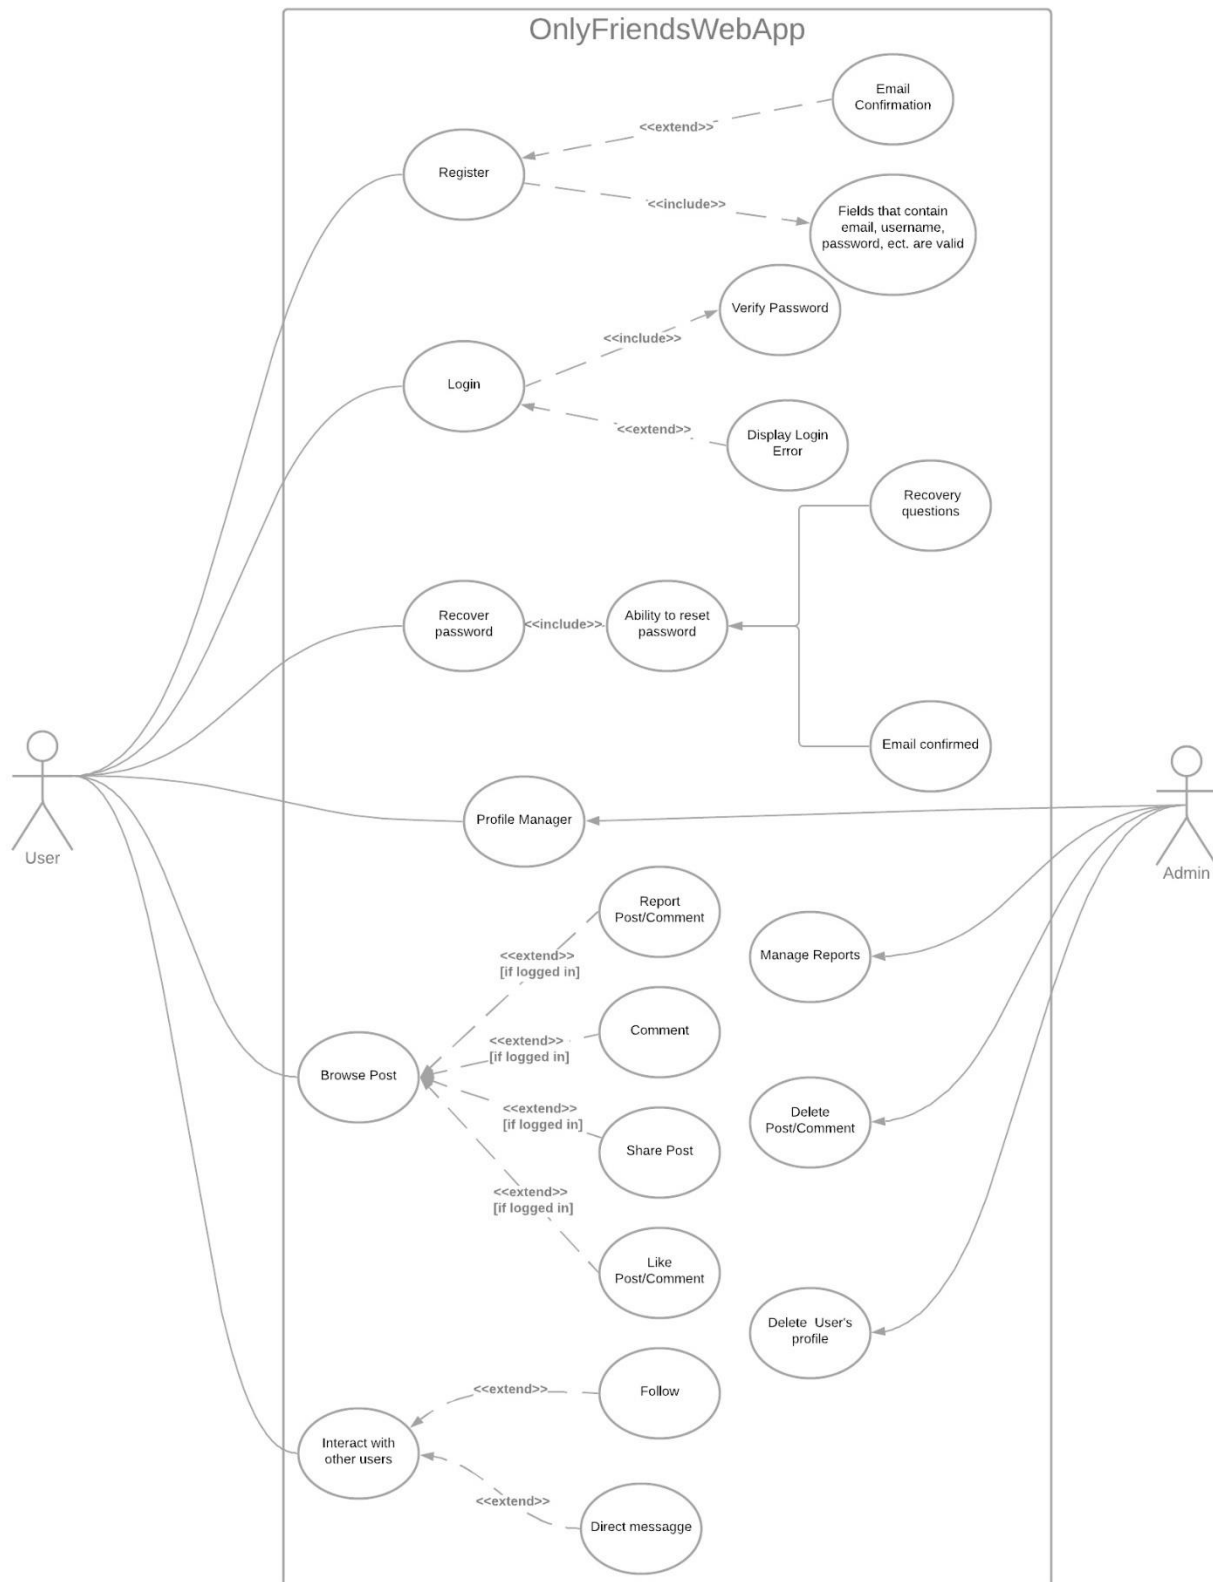

Criterion	Facebook	Vkontakte	Instagram	OnlyFriends
Search engine	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	✗
Developed for PC/mobile user	both	both	both	PC
Sharing status and commenting	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Age restriction	From 18	From 18	From 18	Anyone
Administration system	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

3 Use Case

3.1 List of Actors

- Admin: Administrator who runs the website has the rights to manage video/post, delete inappropriate comments, disable a user.
- User: To use the website the user needs to sign in the system. After logging in, the user will be able to add a status, comment on any post, manage his post or comment. Besides, the user can either see other profile or edit his profile.

3.2 Use Case Diagram

3.3 Use Case Specification

Use cases	Description	Actor	Preconditions	Main stream	Sub stream	Postconditions
Register	User can	User	User has no	User will fill	If the	If the

	create a new account		account and wishes to make a new one	out a registration form with basic information	information entered is not in the correct format or account already exists in the system, the user is forced to reenter it	information entered is successful, a new account will be created. In case the user entered email, the user needs to confirm that email.
Login	Sign in the website	User	User has a created account	User enters the login field with email or username and password	If the login information entered incorrectly, the user needs to fill in again.	With the correct login, the user will be directed to the main page of website and will be able to use some special features
Recover Password	To regenerate password	User	The user forgets password. This account must be set recovery questions or have email confirmed	The user may choose some recovery questions and answer them. All of which should be correct in two times. If the user has email confirmed, a verification code will be sent.	If the user gives incorrect answers more than two times, he needs to re-answer after 30 minutes. If the code entered by the user doesn't match the code sent by the system, the user can resend verification code after 2 minutes	Having confirmed by the system that the user owns this account, he can set a new password straight away.
Profile Manager	Edit profile, manager owned posts	Admin and User	User or Admin logged in the system	Add information, delete/edit post, upload profile photo, change password,	-	After user saves change, system update that account's profile

				ect.		
Browse Post	Stream videos, see posts and read comments on the website	User	-	The user can scroll up and down to load new posts	If the user who hasn't logged in system interacts with post and other users, the website will forward to login/sign up page. For registered user, he can report violation, react to post, leave comments and share	-
Interact with other users	Conectivity between users	User	User logged in system	User should be able to follow other users and send direct messages	-	-
Manager Reports	Display violations	Admin	Logged in as admin	The admin should be able to read add violations reported by user	-	-

4 Database Design

4.1 List of Entities, Properties

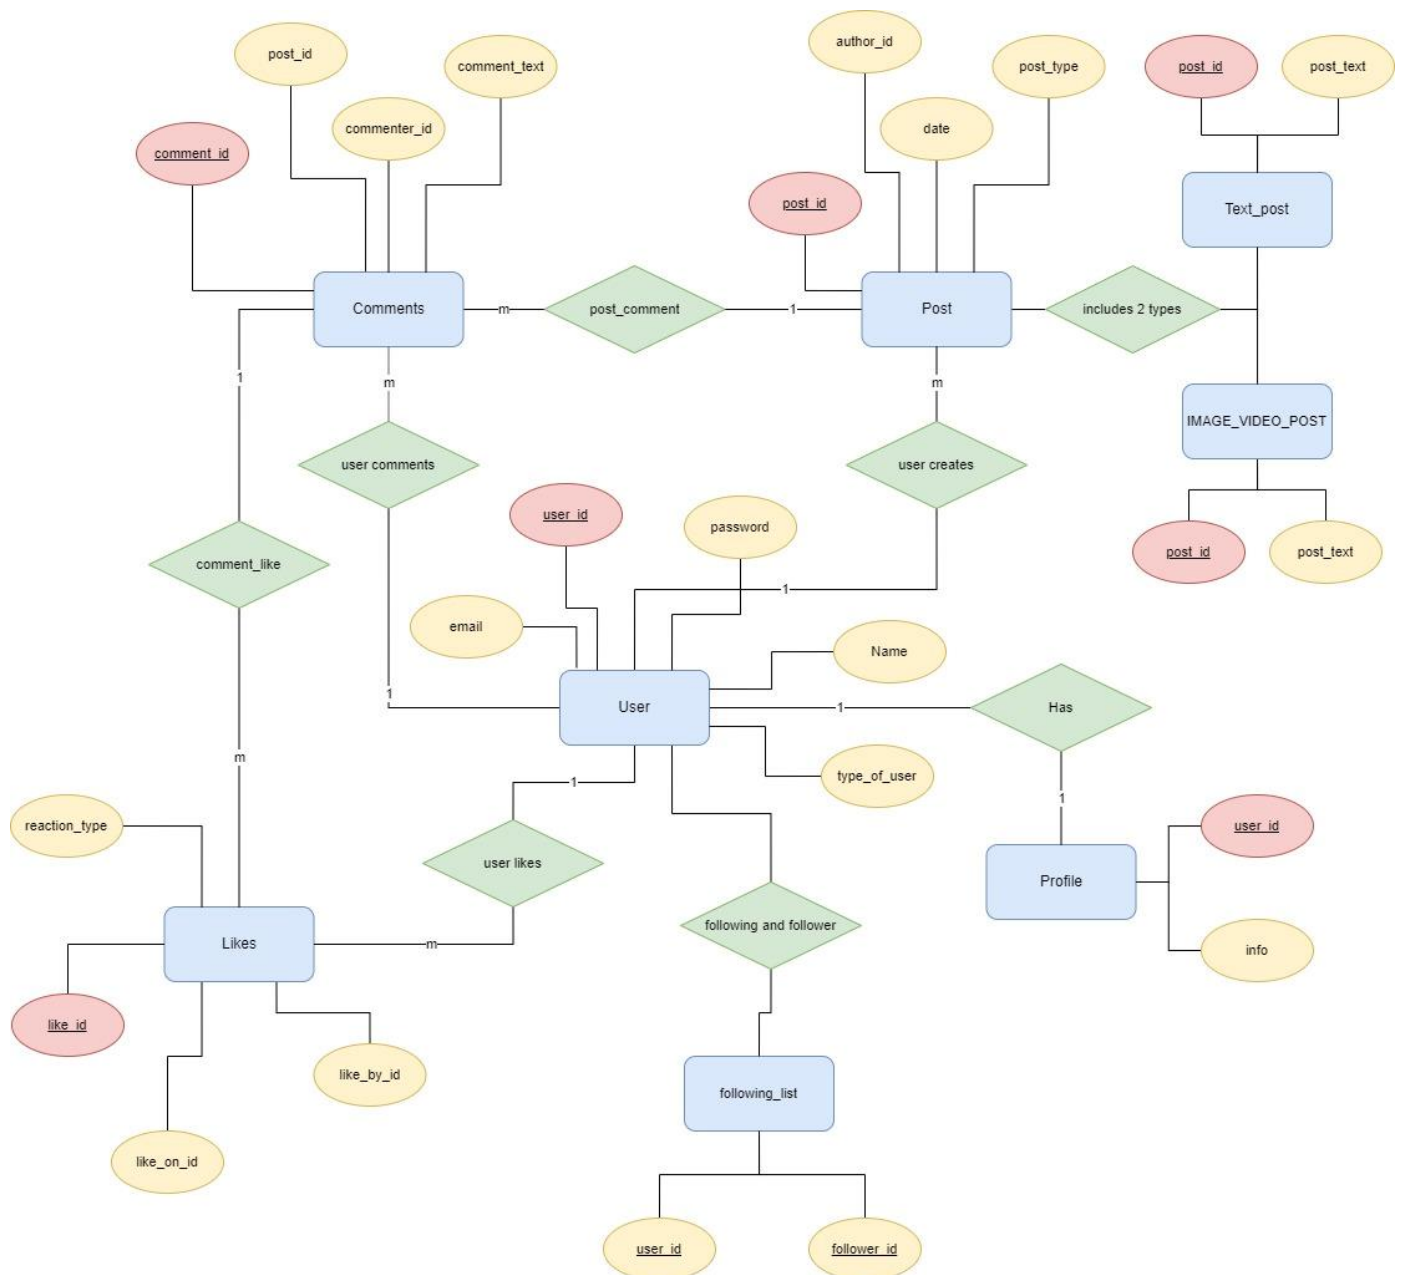

Entity	Property	Comment
User	user_id	Key property for this entity. User ID is generated automatically.
	email	User's email address.
	password	User's password.
	Name	User's name to be displayed on website.
	type_of_user	This property can be user or admin.
Profile	user_id	User's ID
	info	All information about user displayed like json file.

following_list	user_id	This is a foreign key property.
	follower_id	This is a foreign key property.
Post	post_id	Each post has a key ID.
	author_id	ID of the creator of this post.
	date	Date created.
	post_type	This property value can be TEXT or IMAGE_VIDEO
Text_post	post_id	Post ID
	post_text	Post content.
IMAGE_VIDEO_POST	post_id	Post ID
	post_text	Post content, including url to file location of image or video.
Comments	comment_id	Comment ID.
	post_id	Post ID that contains this comment
	commenter_id	ID of Commenter.
	comment_text	Content of this comment.
Likes	like_id	ID of this like
	like_on_id	Comment ID that receives reaction.
	like_by_id	who reacted to this.
	reaction_type	This field can take values of upvote(agree) or downvote(unsupport)

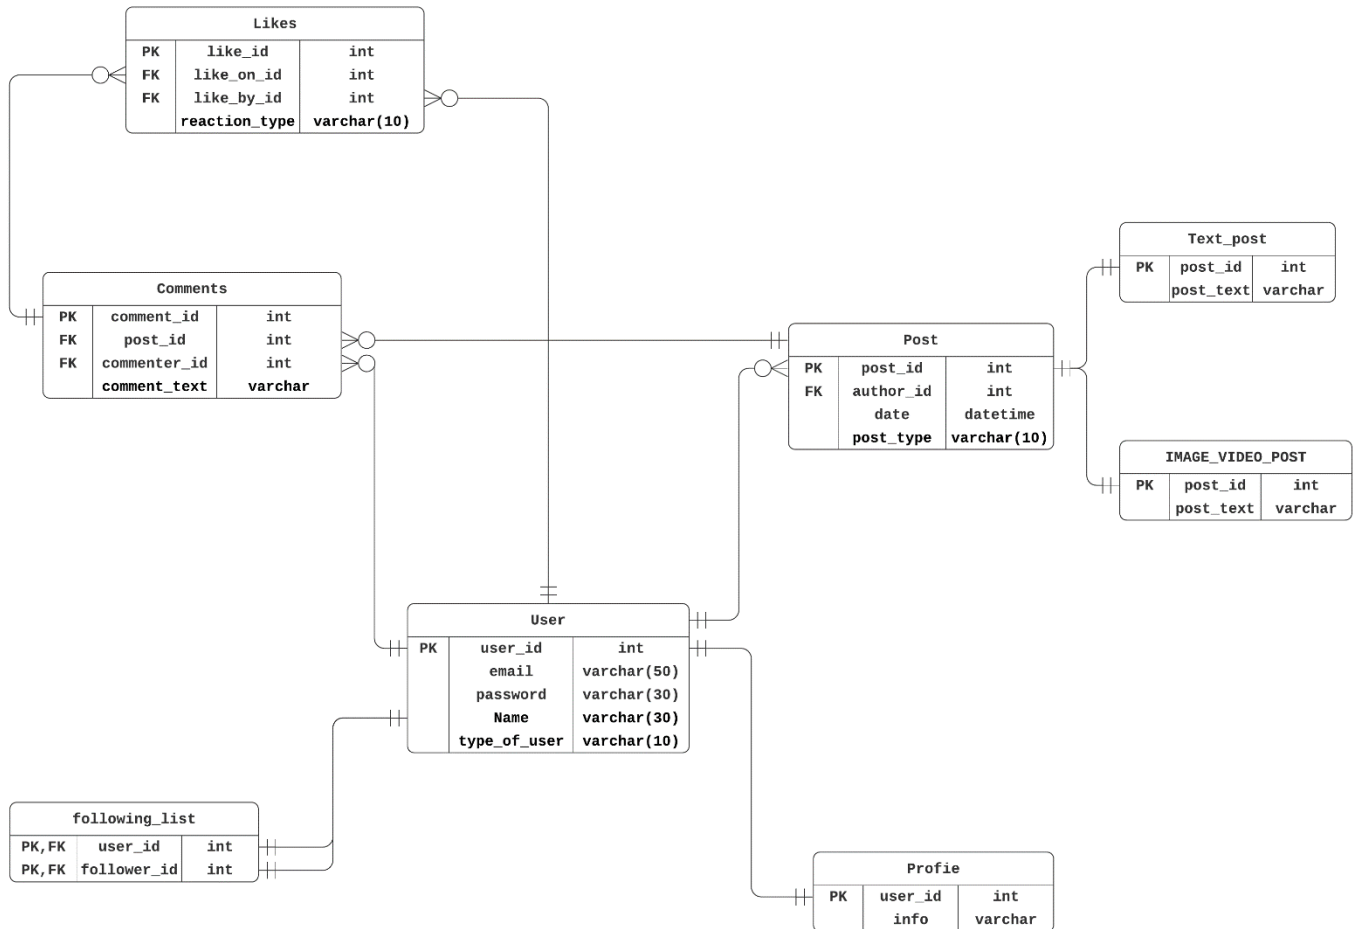

Relationships:

- One-to-many relationship (user creates) between User and Post. A User may create several posts.
- One-to-many relationship (user comments) between User and Comments. A User may comment multiple times.
- One-to-many relationship (user likes) between User and Likes. A User may have various likes from post's comments.
- One-to-many relationship (comment_like) between Likes and Comments. A comment can receive numerous likes.
- One-to-one relationship (Has) between User and Profile. Each User has one and only one Profile.
- One-to-many relationship (post_comment) between Post and Comments. A Post can have lots of comments.

4.2 Entity Relationship

4.3 Database model

5 User Interface

5.1 List of Interfaces

- **Not Authenticated**

- [Login page](#): Before authentication, if the user tries to access any url, it will automatically redirect to [login page](#).
- [Register page](#).
- [Verification page](#)
- [Message page](#): After registering, the user needs to click on the link that sent to the user's email in order to activate account. The link is basically a request contains token as request param. After that, it will direct to the message page, whose content is:
 - Registration confirmed. You can now log in.
 - This token has expired.
 - Invalid user

Besides, a [message page](#) with content "Access denied" will appear when an error code 403 occurs in sever.

- **User**

- [News feed page](#): Display of statuses and comments on them. If a comment is commented by the user, there will be a link button "delete" allows the user to

delete that comment. At the footer of a Status, there is a comment box, where the user can post a comment.

- [Add status page](#): When the user is authenticated, there will be a link button navigating to [add status page](#). After clicking on addStatus(submit) button, a post request will be sent and the website will navigate to [New feed page](#).
- [Edit status Page](#): It's quite similar to [add status page](#).
- [About page](#): This is profile page showing information of the user. There will be an Edit button, navigating to [edit profile page](#). If the user go to other profile page, there will be only display of information of that user without button Edit.
- [Edit Profile page](#): User can change personal information and change profile photo(avatar).
- [Home page](#): Display all statuses owned by the User. More over the user can add image to status, delete image of the status, edit status text and permanently delete that status.
- [Upload Image page](#): This page appears when the user changes profile photo and add image to his status.

- **Admin**

- [User Management Page](#): User with role ADMIN can see all user and disable any user.
- [Status Management Page](#): User with role ADMIN can see all statuses and comments, he should be able to delete them as well.

5.2 Interface Appearance

1. Login page

- login page

The screenshot shows the 'User Login' page of a web application named 'OnlyFriends'. The page has a dark blue header with the site name 'OnlyFriends' and navigation links 'Home' and 'About'. A 'Login' link is in the top right corner. The main content area is light blue and contains a white login form. The form has two input fields: 'Email' and 'Password'. Below the password field are two buttons: 'Sign In' (dark blue) and 'Cannot Sign In?' (light blue). At the bottom of the form area, there is a link: 'Don't have an account? Register now!'.

- login page with error

The image shows a web page for 'OnlyFriends' with a dark blue header. The header contains the site name 'OnlyFriends' and navigation links 'Home' and 'About'. A 'Login' link is visible in the top right corner. The main content area is light blue and features a 'User Login' section. At the top of this section is a red error message: 'Incorrect Email or Password'. Below the error message is a login form with two input fields: 'Email' and 'Password'. The 'Email' field has a blue border, while the 'Password' field has a grey border. Below the password field is a blue 'Sign In' button and a link that says 'Cannot Sign in?'. At the bottom of the login section, there is a link that says 'Don't have an account? Register now!'.

5.3 Interface Activity Diagram

6 Technologies

6.1 IntelliJ IDEA

IntelliJ IDEA enables developers to work more efficiently. They can write better code with consistent style, fewer bugs and exceptions, better referencing of the existing code base, better structure, and more.

6.2 Spring Framework

The Spring Framework is an application framework and inversion of control container for the Java platform. The framework's core features can be used by any Java application, but there are extensions for building web applications on top of the Java EE platform.

6.3 Bootstrap

Bootstrap is a free and open-source CSS framework directed at responsive, mobile-first front-end web development. It contains CSS- and JavaScript-based design templates for typography, forms, buttons, navigation, and other interface components.

6.4 Apache Tiles

Apache Tiles is a template composition framework. Tiles was originally built to simplify the development of web application user interfaces, but it is no longer restricted to the JavaEE web environment.

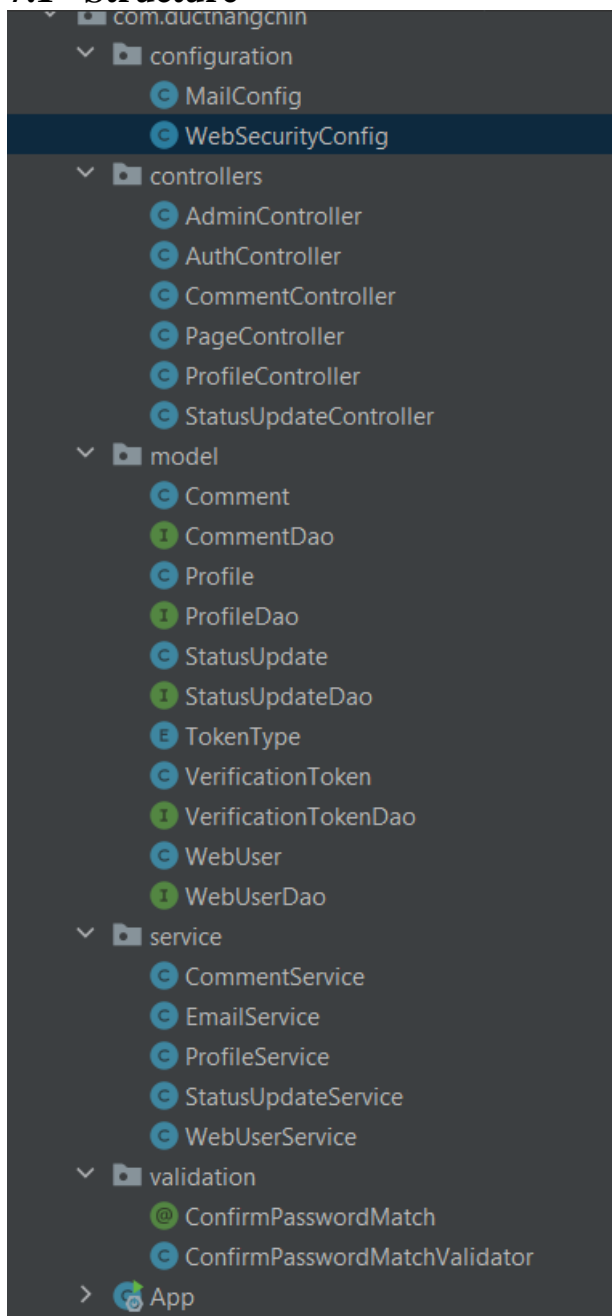

6.5 MySQL

Oracle MySQL Database Service is a fully managed database service that lets developers quickly develop and deploy secure, cloud native applications using the world's most popular open source database.

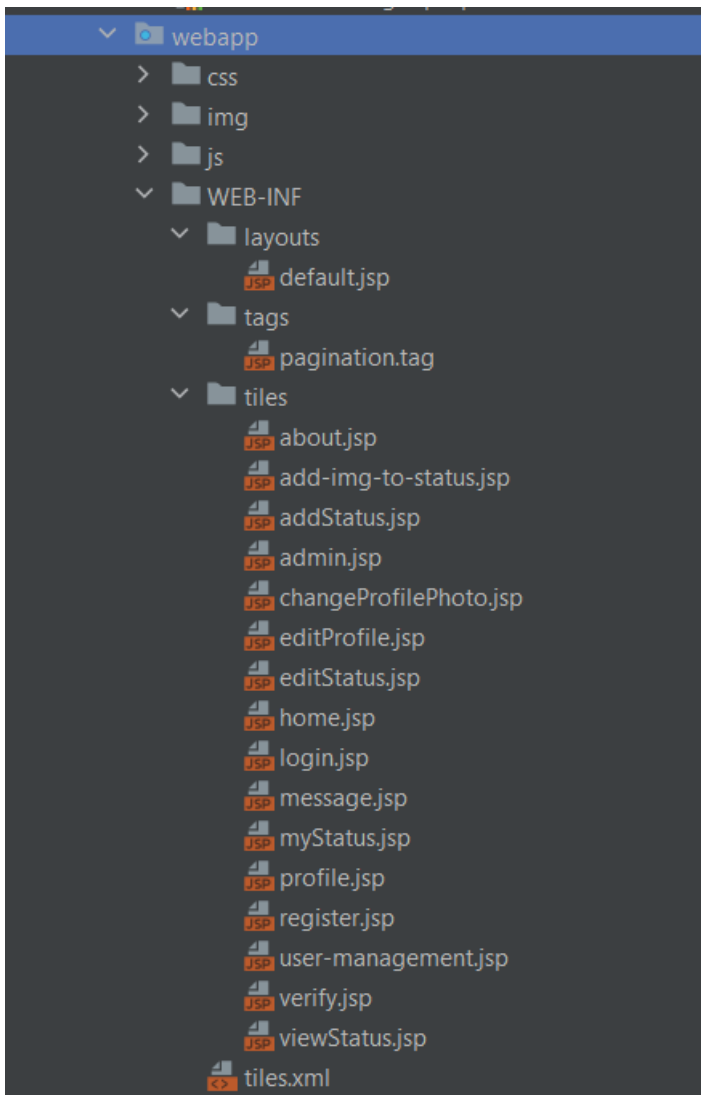

7 Project Implementation

For developing our web application, I built project on MVC architecture pattern using Spring framework. Apache Tiles allows to define page fragments which can be assembled into a complete page at runtime.

7.1 Structure

Picture 1: Backend directory structure.

Picture 2: Frontend interface page.

```

@SpringBootApplication
public class App extends SpringBootServletInitializer {

    public static void main(String[] args) { SpringApplication.run(App.class, args); }

    @Override
    protected SpringApplicationBuilder configure(SpringApplicationBuilder builder) {
        return builder.sources(App.class);
    }

    @Bean
    public TilesConfigurer tilesConfigurer() {
        TilesConfigurer tilesConfigurer = new TilesConfigurer();

        String[] defs = {"/WEB-INF/tiles.xml"};

        tilesConfigurer.setDefinitions(defs);

        return tilesConfigurer;
    }

    @Bean
    public UrlBasedViewResolver tilesViewResolver() {
        UrlBasedViewResolver tilesViewResolver = new UrlBasedViewResolver();
        tilesViewResolver.setViewClass(TilesView.class);
        return tilesViewResolver;
    }

    @Bean
    PasswordEncoder getEncoder() { return new BCryptPasswordEncoder(); }
}

```

Picture 3: Spring Boot first configuration with some Beans defined.

7.2 Database

	Tables_in_onlyfriends

8 Conclusion

The idea of the original project is somewhat different from the product. I removed a few unnecessary features, and also revised the database and interface to be more suitable. After complete complementation, I launched the application and checked its performance, from which I am certain enough to conclude that project was successful.
